

# Como instalar certificado SSL em domínio via WHM

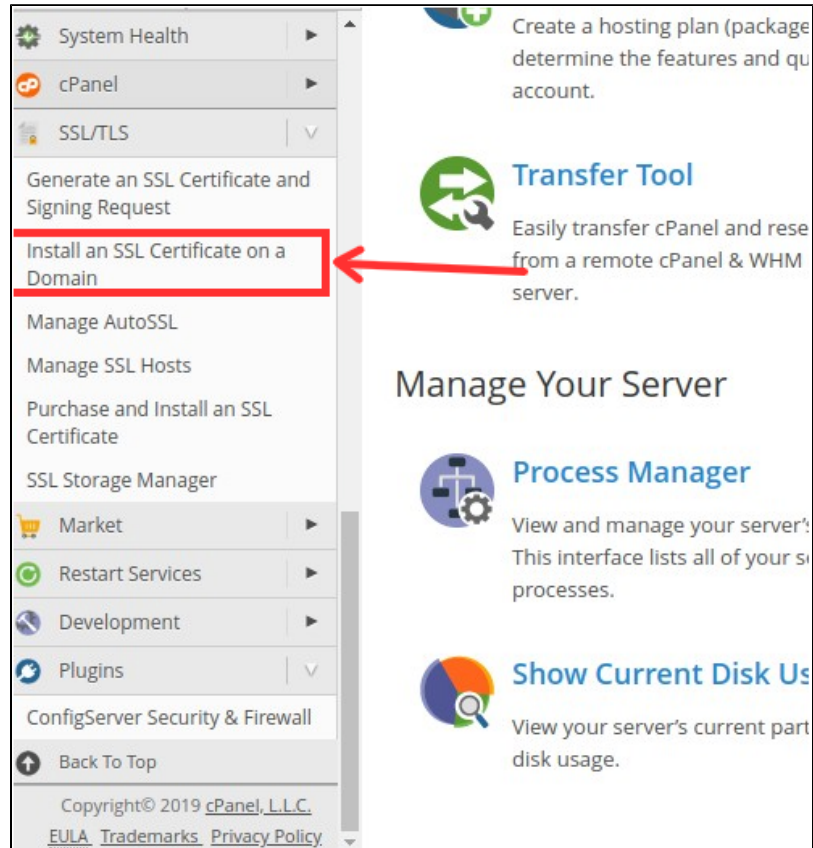

## Install an SSL Certificate on a Domain

Para realizar as ações contidas neste tutorial, consideramos que você tem um plano VPS ou servidor dedicado com acesso root. Se seu plano for compartilhado (hospedagem / revenda) a instalação deve ser feita pela nossa equipe.

1

Será necessário acessar o servidor utilizando o usuário **Root**, no painel WHM (*Web Host Manager*) clique **“Install a SSL Certificate on a Domain”** localizado na categoria chamada **“SSL/TLS”** conforme imagem abaixo:

2

Na próxima página será fornecido alguns campos vazios para que você preencha com o certificado, chave privada e o CA Bundle. Depois de ter preenchido todos os campos, você pode clicar em "Instalar".

**Importante:** A chave RSA(private/privada) utilizada deve ser a chave RSA(private/privada) gerada junto com o CSR que você usou para solicitar o certificado SSL.

**Nota:** Se as chaves CSR/RSA(private/privada) foram geradas no servidor onde o SSL está sendo instalado, você pode usar a opção "Auto-Fill" após você preencher o certificado SSL. As demais informações serão carregadas automaticamente.

The screenshot shows the cPanel interface for managing SSL/TLS. On the left, the 'SSL/TLS' menu is expanded, showing options like 'Generate an SSL Certificate and Signing Request', 'Install an SSL Certificate on a Domain', 'Manage AutoSSL', 'Manage SSL Hosts', 'Purchase and Install an SSL Certificate', 'SSL Storage Manager', 'Market', 'Restart Services', 'Development', 'Plugins', and 'ConfigServer Security & Firewall'. The 'Install an SSL Certificate on a Domain' option is highlighted. The main content area has several sections with red text annotations:

- Domain:** A text input field with the red text "Domínio" above it.
- IP Address (non-user domains only):** A dropdown menu set to "Auto-discover". Below it, a note says: "Leave this text box blank unless you wish to create an SSL website for a domain that is not attached to a user account."
- Certificate:** A large text area with the red text "Cole o certificado SSL aqui" (Paste the SSL certificate here).
- Private Key:** A large text area with the red text "Cole a chave RSA (privada) aqui" (Paste the RSA (private) key here).
- Certificate Authority Bundle:** A large text area with the red text "Cole o CA BUNDLE aqui" (Paste the CA BUNDLE here).

Below the Private Key section, there is a note: "The key may already exist on the server. You can automatically fill the key or paste the entire .key file above." Below the Certificate Authority Bundle section, there is a note: "In most cases, you do not need to supply the CA bundle. The server will".

**NOTA:** Para o campo "Ca Bundle", você deve usar o arquivo que foi enviado junto com o certificado SSL. O "Ca Bundle" deve ser instalado com o certificado para evitar quaisquer complicações que possam surgir. O CA Bundle será composto de 3 chaves diferentes semelhantes ao seguinte:

#### Exemplo CA Bundle:
